Architectural Layer: Applications

Release From: Xe Release To: 9.0 Update 2

Component(s): Human Capital Management, Oracle Business Accelerators, Capital Asset Management, Customer Relationship Management, Financial Management, Manufacturing, Order Management, Project Management, Supply Chain Execution (Logistics), Supply Chain Planning, Supply Management (Procurement), System

Human Capital Management

Time and Labor

Accrual Calculations (Modified) [1307 : 25-Mar-2011]

Accrual calculations allow calculations in terms of days rather than hours. This provides the ability to accrue and establish limits based upon each employee's standard and non-standard hours worked per day.

Change: Added in Release 8.12

Status: Available Type: Feature Industry:

Examples: Give accruals to employees in units of days, where one employee works their standard 4 hours per day and another employee works their standard 5 hours per day; both will accrue 1 workday per pay period under the accrual plan.

Accrual Pro-Ration Across Anniversary Years [1308 : 25-Mar-2011]

PDBA setup has been modified to allow the user to specify how to handle accruals and time taken during a period in which the employee's rollover date is included. The option lets users specify whether time should be allocated to the next anniversary period or to be split across the current anniversary year and the next anniversary year.

Change: Added in Release 8.12

Status: Available Type: Feature Industry:

Child Support EFT Compliance [1320 : 25-Mar-2011]

Associate additional information to child support wage attachments required to generate electronic funds transfer (EFT) payments in the Accounts Payable system. Added fields in the Employee Wage Attachments and company options allow you to specify which wage attachments generate EFT payments and which Accounts Payable payment instrument is used to identify EFT voucher records.

ORACLE

Applications 9.1 Themes

Productivity ■ Industry ■ Compliance

Drive Improved User Productivity

- One ViewReporting
- Web client user interface
- Mobile applications
- Automate Voucher Match
- RSS Delegation
- WO Mass Maintenance

More Industry Specific Functionality

- Project Manufacturing
- Forecast Consumption
- Blend Management
- Grower Management
- Advanced Real Estate
- Project Revenue Forecast

Support Compliance and Global Business

- Country of Origin
- Global Locator Number
- Localizations
- Life Sciences EBR
- Environmental Accounting
- Hyperion Integration

ORACLE

One View Reporting

- What**
- Intuitive reporting solution enables end users to access and personalize transaction data into lists, charts, graphs and tables
 - Large library of pre-defined reports designed to answer the most common business questions

Target: All organizations who want to improve their bottom line

- Why**
- Providing end users access to the right data, in real time, leads to more effective decision making and improved productivity

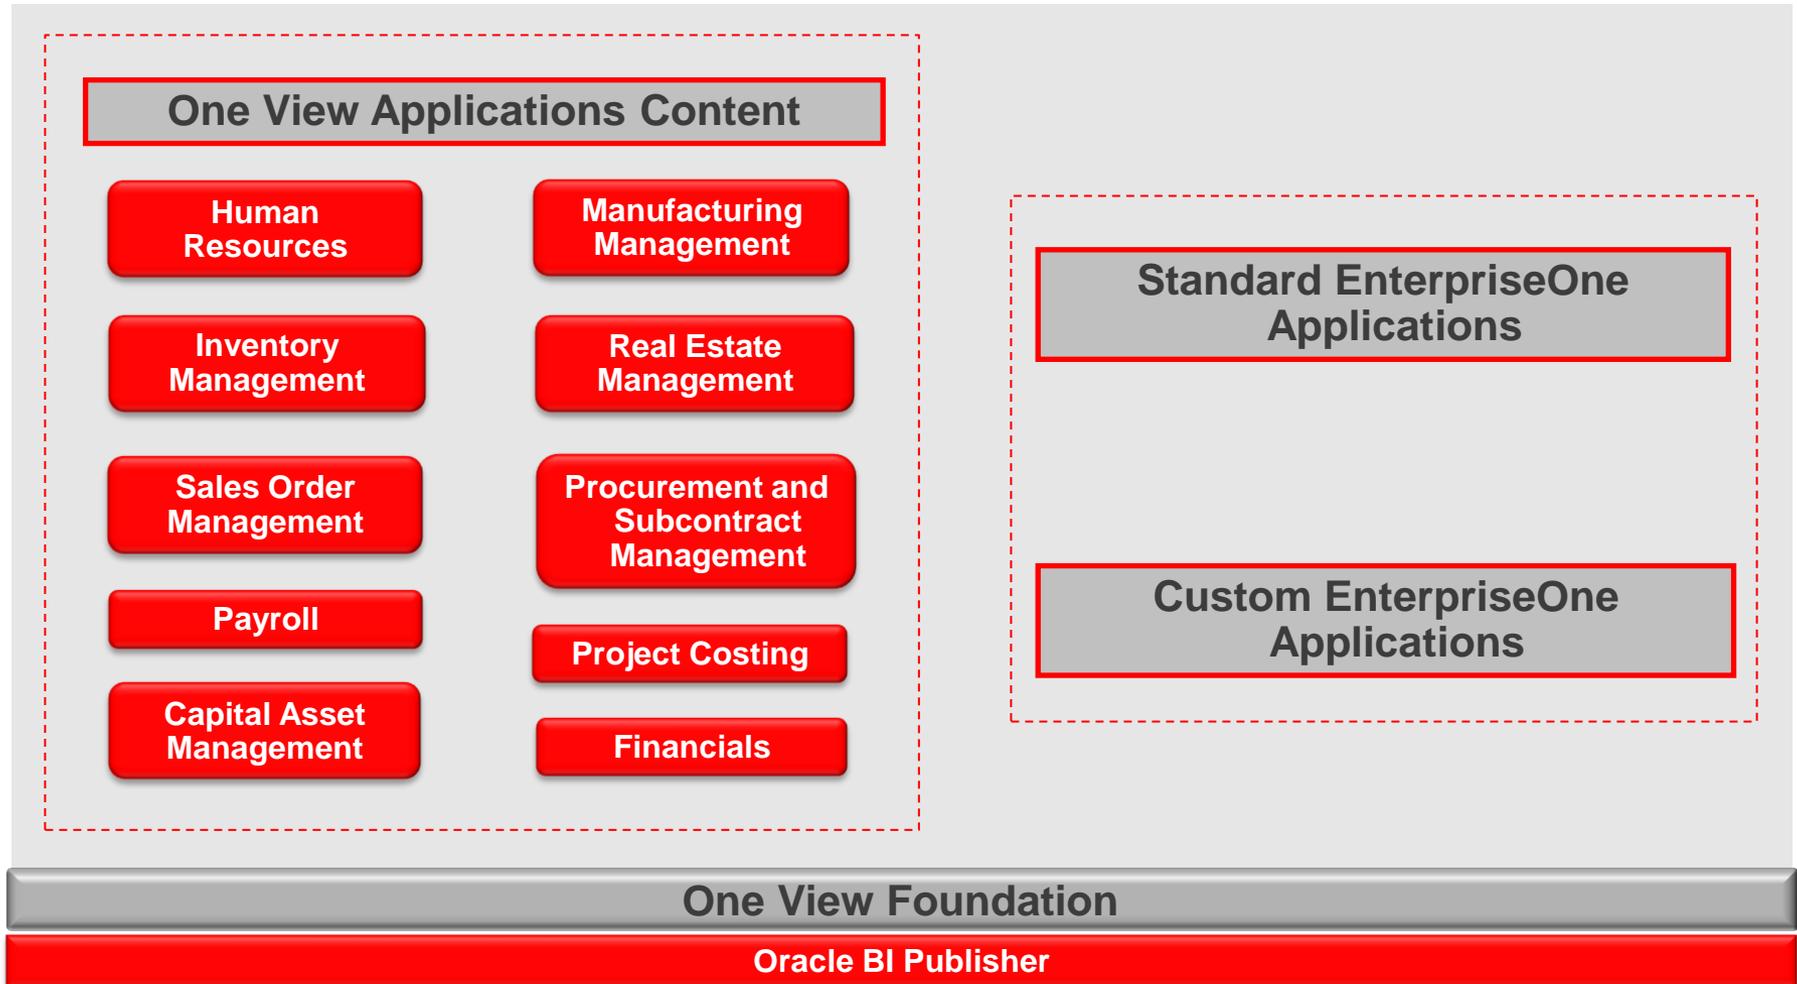

- How**
- Intuitive report creation leverages Interactive query applications powered by Business Intelligence Publisher
 - Supports all EnterpriseOne modules
 - Supports custom EnterpriseOne query applications
 - Purpose built applications and reports

- Results**
- Report creation empowers end users, provides improved decision making, and reduces IT costs

- Customers**
- #1 enhancement request from user groups

Mobile Smartphone Applications

What ■ Provide business applications that can be run on smart phones.

Why ■ Enable our customers to perform business critical tasks while away from the office.

How New Modules

- Mobile Purchase Order Approvals
- Mobile RSS Approvals
- Mobile Sales Inquiry
- Mobile Expense Management

Results ■ Customers can approve or reject Purchase Orders, RSS Orders, and Expense Reports from anywhere at anytime

- Sales force will now have visibility into Sales Orders and Inventory Availability while at a customer site.
- Employees can create, edit, and submit their Expense Reports as they incur their expenses.

Customers ■ Core business processes for customers using Sales Order Processing, Procurement Management, Requisition Self Service, and/or Expense Management.

Field Service Work Order for iPad tablet

- What**
- Sized to fit an iPad
 - Allows technicians to access their work orders, map locations and update status
- Target:* organizations with technicians performing work orders in the field

- Why**
- Increase efficiency and provide core info

- How**
- Tools 8.98.4.5 / Apps 9.0 Update 2, ESU
- Filters the technicians' work orders
 - Allows one-touch Google mapping
 - Provides access to essential information
 - Smart button for update work order status
 - Inquire on parts and labor
 - Uses media objects for detailed info
 - Specialized gestures for JD Edwards E1

- Results**
- Simplified, convenient and easy to use

Auto Suggest Searching

What ■ Auto suggest (type ahead) capabilities across EnterpriseOne

Why ■ Enable users to more efficiently locate and select records using descriptions

How ■ New application and auto suggest capabilities

- Configuration application to enable auto suggest
- 15 data items enabled with auto suggest
- 9 UDC s enabled with auto suggest
- Dynamically present the user with a list of values as characters are typed
- Ability to extend the data items using auto suggest

Results ■ Promote efficient work process and improve end user's experience

- Remove the code-heavy feel of applications

Customers ■ All EnterpriseOne customers

Hover Text

What ■ Hover text capabilities across EnterpriseOne

Why ■ End users of enterprise applications are demanding modern Web 2.0 features within applications they use everyday in the course of executing their daily tasks

How New application and hover forms

- Configuration application to enable hover
- 7 predefined hover forms for Address Book and Items
- Ability to create user-defined hover forms

Results ■ Instant access to commonly needed data elements on high traffic forms

- Promote efficient work process and improve end user's experience

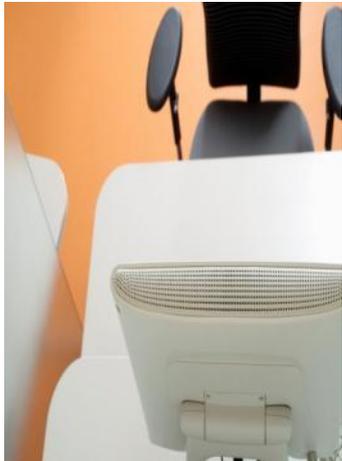

Customers ■ All EnterpriseOne customers

Voucher Match Automation

- | | |
|------------------|---|
| What | <ul style="list-style-type: none">▪ Automatically match invoices to purchase orders and purchase order receipts and creates vouchers. |
| Why | <ul style="list-style-type: none">▪ Improves the Accounts Payable process by eliminating the need to manually match all invoices to purchase orders and purchase order receipts. |
| How | <p>Enhancement to the Procurement Management and Accounts Payable modules</p> <ul style="list-style-type: none">▪ Batch process matches invoices to purchase orders and purchase order receipts based upon automation rules assigned to suppliers▪ Optionally creates logged vouchers for each invoice |
| Results | <ul style="list-style-type: none">▪ Large percentage of invoices can be automatically matched.▪ Manual processing is only required for exception invoices |
| Customers | <ul style="list-style-type: none">▪ Core business process for customers utilizing Accounts Payable and Procurement Management |

Requisition Self Service

- What** ■ Customers can delegate their Requisition Self-Service entries, approval rights, receipt inquiry and reversals rights to another user during a time of absence.
- Why** ■ Often employees need to delegate their assignment of work to ensure business continues without interruption during a leave of absence.
- How** ■ Streamlined and easy setup of delegation activities has been deployed within Requisition Self Service.
- Results** ■ Reduce latency of Requisition Self-Service entries approvals and reversals.
■ Improve sustaining day to day work schedules and productivity .
- Customers** ■ Core business process for any employee need to delegating their rights to another employee during a time of absence.

Work Order Mass Update

- What**
- The ability to update a batch of Work Orders at one time.
 - Includes the ability to edit a large number of work order fields across multiple work orders.
- Target:* organizations with large volume of work orders.

- Why**
- Increase efficiency and improve data integrity.

- How**
- New application:
 - Allows the search and selection of candidate WOs
 - Allows the same edit to key fields across multiple work orders at one time.
 - Provides feedback on errors
 - Includes built-in checks and controls to reduce unintended updates

- Results**
- Improved efficiency in the business process of closing/updating work orders.

- Customers**
- #1 enhancement request from EAM user group.

Sales Order Automation Rules

What ■ Define the sales order actions that create electronic transactions for external consumption

Why ■ Using Sales Order Automation Rules customers can reduce demand on the transaction server by eliminating the number of sales orders transactions created

How ■ New application to define criteria to filter real time events (RTE) for sales orders based on business unit, order type, and status code

■ Change sales order RTEs (RTSOOUT, RTINVOUT, RTSHPOUT) to use the filter criteria

Results ■ Improve system performance

■ Reduce administrative costs

Customers ■ All customers that heavily use real time event transactions

Portal Content Acceleration

- What**
- Comprehensive documentation that combines EnterpriseOne portal content and step-by-step instructions for designing and creating portal sites
 - Illustrates EnterpriseOne FDA portlets for Customer, Supplier, Buyer, and Human Resources self service
 - Includes instructions for creating additional portal content with E1 HTML Configurable Portlets and page design functions
 - Includes examples of sample portal pages
 - **New** role-based HCM portlets

- Why**
- Simplify tasks associated to a portal deployment

- How**
- Documentation from various sources is combined in a single guide, with links to other supporting documentation
 - Specific instructions for EnterpriseOne-supported portal platforms

- Results**
- Accelerate ability to create professional, purpose-built portals

- Customers**
- Customers implementing a portal strategy

Sales Order Management – Performance Increase

What ■ Union All is a tools performance improvement project for applications to reduce the fetch time on interactive and batch applications

Why ■ Many applications have requirements to improve system performance and increase response time
■ Before applying this functionality to multiple applications, we evaluated one interactive and one batch program for performance trends

How ■ Change Sales Order Entry (P42101) and Print Invoice (R42565) from default Union to Union All
■ Perform load test and stress test on the applications

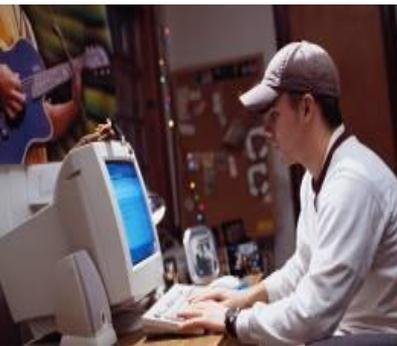

Results ■ Improve load performance in P42101 by 26%
■ Improve stress performance in P42101 by 15%
■ Improve processing time for R42565 by 14%

Customers ■ All EnterpriseOne Sales Order Management customers

Project Manufacturing

- What**
- Provide visibility and track-ability of the customer order throughout the manufacturing process
 - Provide visibility and track-ability of forecasts that were defined for particular customers or specific areas throughout the manufacturing process

- Why**
- Improve customer satisfaction by providing visibility to the customer's demand throughout the manufacturing process to ensure on-time, high quality delivery of product

- How**
- Associate demand to its work orders, purchase orders, and inventory through a unique Production Number

- Results**
- Review all related orders that impact whether or not a customer order/project stays on track and take action as needed

- Customers**
- Customers that require the ability to trace their demand from sales order entry through shipment

Forecast Consumption by Customer

What

- Enhanced calculations to evaluate partial shipped quantity in the calculation for total sales demand within Forecast Consumption by Customer

Why

- Improve forecasting by considering the total demand that partial demand remaining on the sales order

How

- Shipped quantity is subtracted from the order quantity in the calculation of sales demand by customer

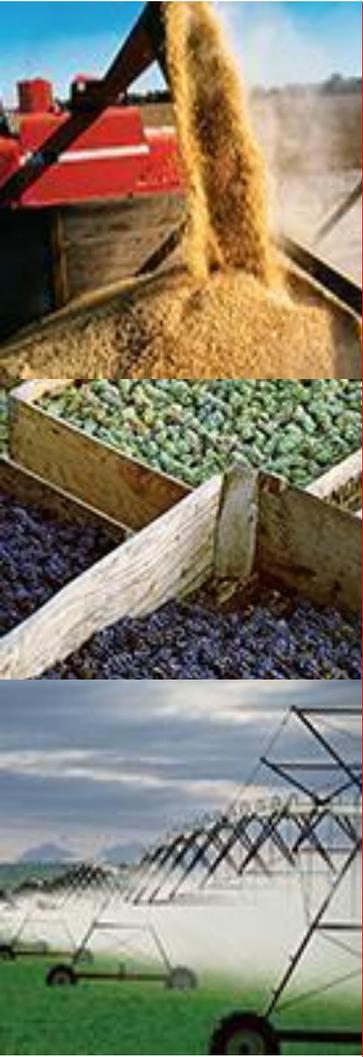

Results

- MRP compares the forecast demand to actual remaining sales demand by customer

Customers

- Industrial Manufacturing

Agribusiness

What ■ Grower was expanded to include new business processes to pay based on proceeds, more accurately capture costs, and improve visibility of crop information

Why ■ Market prices can fluctuate widely in a short period of time, profit margins are very low so it is important to accurately track costs and plan carefully based on demand

How ■ Create purchase order based on the crop estimate to view demand against estimated crop output
■ Match incoming weigh tags to outgoing sales orders to pay a grower based on the market price for a crop
■ Add new fields to capture accurate costs for equipment usage

Results ■ Improve crop visibility and demand planning
■ Accurately capture farm activity costs by using actual time for equipment usage
■ Pay growers based on the market price of the crop when sold

Customers ■ Agribusiness customers

Project Revenue and Costing Forecasting

What ■ Forecast project cost and revenue on a period-by-period basis

Why ■ With tight credit, limited cash and low margins, companies require the ability to forecast cost and revenue in more detail

How New application

- Automatically spread estimate to complete by cost code
- Allow for manual adjustments to forecast
- Allow for what-if versions of forecast
- Ability to post to account balances for reporting

Results ■ Detailed forecast of cost and revenue by period

- Better visibility into project cash flow

Customers ■ Engineering & Construction and other project-oriented companies

Real Estate Management

What ■ Streamline business processes in real estate related to cash and cash receipts

Why ■ Property managers are required to manage more properties with the same amount of staff. Minimize additional staffing costs by streamlining processes

How Process improvements

- Eliminate steps to manage prepaid rent
- Include running total in cash receipts
- Automatically convert unapplied receipts to credit memos

Results ■ Accurate accounting of prepaid rent throughout lease lifecycle

- Quickly and accurately manage cash receipts
- Eliminated steps to refund unapplied cash

Customers ■ Companies owning or managing commercial and retail properties

Country of Origin

What ■ Customers need the ability to assign, monitor, report and manage the country of origin to inventory records throughout the supply chain.

Why ■ Customers have the ability to purchase or manufacture a single item from multiple countries. Thereby, customers may be required to associate the country of origin to their inventory items.

How ■ All programs, functions and reports that affect inventory into JD Edwards EnterpriseOne support the country of origin.

Results ■ Reduce cost of customizing a system to track country of original at the inventory item level.
■ Reduce risk associated with non-compliance on regulatory recommendations.

Customers ■ Core business process for any customer requiring to track their country of origin to items in inventory.

Global Location Number

What ■ GLN is a unique 13 digit number assigned to a location and meets the requirements of all businesses anywhere in the world and complies to the standards set by GS1, a non-for-profit standards organization

Why ■ Using the GLN for electronic transactions saves time and money as the number can be moved quickly and confidently through the supply chain

How ■ Store the GLN on the address book record for Sold To, Ship To, Deliver To, Supplier, Origin, and Destination locations

■ Use the GLN on inbound and outbound electronic transactions (EDI, BSSV, and RTE) instead of the full mailing address

Results ■ Improve transaction accuracy

■ Comply to global standards

Customers ■ Life Sciences and other industries that heavily use electronic transactions between trading partners

Integration to Oracle Enterprise Performance Management

What ■ Provide integration between JD Edwards EnterpriseOne General Ledger and the Oracle Enterprise Performance Management (Hyperion)

Why ■ Enable our customers to use the features of Oracle EPM with JD Edwards EnterpriseOne General Ledger data.

How New Module for Oracle Enterprise Performance Management (EPM)

- An adapter has been built to extract data from EnterpriseOne General Ledger into the Oracle EPM data source
- A drill back feature is available from within EPM to the Trial Balance application within JD Edwards EnterpriseOne to view details of the information available in EPM

Results ■ Customers can now view JD Edwards EnterpriseOne General Ledger data within the Oracle EPM product

Customers ■ Core business processes for customers using EnterpriseOne General Ledger and Oracle EPM

Environmental Accounting and Reporting

- What**
- Comprehensive environmental data management
 - Seamless integration with JD Edwards EnterpriseOne

- Why**
- Enables organizations to track their greenhouse gas emissions and other environmental data
 - Environmental reporting for both voluntary and legislated emissions reporting schemes

- How**
- New Module
- Data collection using JD Edwards EnterpriseOne Financials
 - Emissions calculation using Greenhouse Gas Protocol
 - Pre-built OBIEE reporting and analytics tools

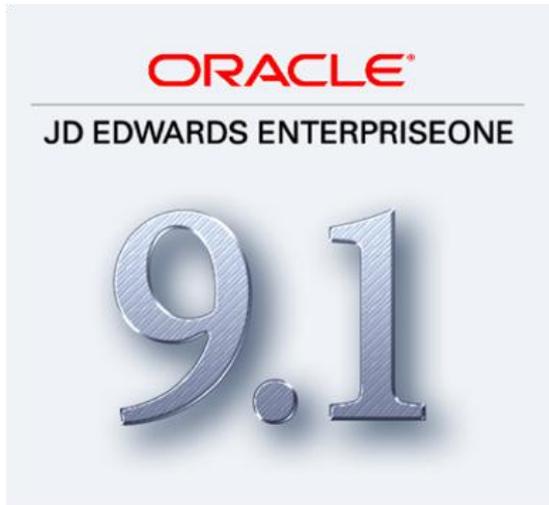

- Results**
- Increase data collection efficiency and reliability
 - Comply with global greenhouse gas regulations
 - Improve environmental and financial performance

- Customers**
- Customers that utilize EnterpriseOne Accounts Payable or Inventory modules

Beyond Software.

More with 9.1...

- New online documentation
